Accessory Installation Instructions

Kit #P200: will fit all Wood Processor Models WP230, WP260, WP630, WP830 & WP860

Please read these instructions before attempting to assemble, install and operate this kit

This Safety Alert symbol means

ATTENTION! BECOME ALERT! YOUR SAFETY IS INVOLVED!

The Safety Alert symbol identifies important safety messages in this instruction. When you see this symbol, be alert to the possibility of personal injury or death. Follow the instructions in the safety message.
Accessory Installation Instructions

PIVOTING CHAINSAW HOLDER

Always wear the appropriate safety gear when installing this kit or working around the machine. This includes but is not limited to:
- Hard hat for protection to the head.
- Safety glasses protection for the eyes.
- Heavy gloves for hand protection.
- Safety shoes with slip resistant soles and steel toes.

Caution: this kit is constructed of heavy gauge steel, be sure to use caution moving and installing the kit, avoid dropping or pinching body parts on corners and edges of the kit.

The #P200 kit comes unassembled. Illustrations show typical assembly. This assembly procedure is one time only. Once assembled regular maintenance and only minor adjustments are required.

This kit will work on older version wood processors, and will require a mounting bracket to be welded in place. Newer wood processors will have this bracket pre-installed and will not require any welding.

The maximum diameter of log that your wood processor will handle is 22”. We recommend that the chainsaw has an effective cutting area of at least 24” to ensure a full cut on a single pass with a maximum sized log. A smaller chainsaw can be used, but may limit the size of wood that can be cut.

If your wood processor has the bracket shown in the diagram, then proceed to the “Assembly” section of this manual.

If your processor does not have the bracket start at the “Weld” section.

Note: Wood Processors after these serial numbers have chainsaw pivot brackets installed:
- WP230 #680005
- WP260 #670005
- WP630 #640008
- WP860 #2E9US1118DS660024

Review your chainsaw manual for safe operating and handling procedures before beginning work.
Installation Instructions:

Ensure the wood processor and the area around it is clean and free of debris, resting on dry level ground, wheel chock applied and the engine shut off. Have the P200 kit close by on a work surface.

Unpack the pivot kit, using the parts list in the back of this manual check that all parts are included. All hardware and small parts are packaged in a plastic hardware bag.

WELD

1. If your wood processor does not have the bracket shown in the diagram then you will have to weld on the mounting bracket included with this kit.
2. The bracket will be mounted to the log chute. On the top of the chute measure 7.5cm (3") from the inside edge and mark the spot. (see illustration)
3. Place the bracket on the edge of the log chute so that the tabs butt up against the edge, set the bracket at the 7.5cm (3") mark and clamp in place.
4. Weld the bracket, let it cool and touch up the welded area to prevent rusting.
5. Loosely install the 2 x carriage bolts and nuts.

ASSEMBLY

Before you start, you'll need some grease and tools: w wrenches and sockets,
• 5/16" 
• 7/16" 
• 1/2" 
• 9/16" 
• 3/4" 

1. Assemble the 2 parts of the debris guard as shown in the diagram. Set the assembly aside.
2. Follow the diagram and assemble the 2 parts of the chain guard, and the ball stud. Set the assembly aside.
3. Find the chainsaw pivot weldment, assemble the spring mount clip and hardware to the weldment as shown in the diagram. Set the assembly aside.

4. Begin the main assembly by placing the Pivot base in to pivot clamp on the wood processor, install the 2 x carriage bolts and nuts, and loosely tighten the nuts.

5. Lightly grease the pivot pin on the weldment assembly, and slide the pivot pin into the pivot base.

6. Secure the pivot weldment with the pivot stop washer, hex bolt and washer as shown.

7. Find the spring and insert the 2 1/2" hex bolt thru one end of the spring and assemble a hex nut on the end, then assemble to the pivot stop washer with a hex nut.

8. Insert the 2" hex bolt thru the other end of the spring, assemble a hex nut on the end, and assemble to the pivot base.

9. Tighten up the hex bolts / nuts to secure everything in place.
10. Find the debris guard and install onto the main assembly with the 2 x carriage bolts and hex flange nuts.

11. Lightly grease the guard pivot pin, and slide the chainsaw guard onto the pin, secure the guard with the hex bolt and washer.

12. Snap the gas spring into place onto the ball studs of the chainsaw guard and main assembly.

13. Remove the guidebar nuts on the chainsaw.

14. Install the 2 x bar mounting studs onto the chainsaw guidebar studs. Tighten down mounting studs.

15. Assemble the elliptical insert to the mounting studs with the 2 x hex bolts, and tighten down.
16. Slide the chainsaw into the gibb plates on the main pivot assembly.

17. Install the 2 x plastic knobs to secure the chainsaw to the pivot main assembly.

18. To make adjustments to the cutting range of the chainsaw, loosen the 2 hex nuts on the pivot clamp and adjust the pivot in or out as required.

19. Anytime an adjustment is made to the pivot, always check for clearance in the chainsaws movement to prevent accidental contact with parts of the processor while the chainsaw is running.

Always ensure the chainsaw pivot is in the up position before pulling up any logs or operating the splitter ram, damage or injury could result from parts colliding.

Always apply the chainsaw brake while working around the chainsaw while it is idling.

After making adjustments to the chainsaw pivot, always check that there is sufficient clearance throughout the chainsaws range of movement to prevent accidental contact between the chainsaw and the processor.
