Common Bolt Torque Values

Checking Bolt Torque

The tables shown give correct torque values for various bolts and capscrews. Tighten all bolts to the torque values specified in the table, unless indicated otherwise. Check tightness of bolts periodically.

IMPORTANT! If replacing hardware, use fasteners of the same grade.

IMPORTANT! Torque figures indicated in the table are for non-greased or non-oiled threads. Do not grease or oil threads unless indicated otherwise. When using a thread locker, increase torque values by 5%.

NOTE:

Bolt grades are identified by their head markings.

Hydraulic Fitting Torque Values

Tightening Flare Type Tube Fittings

- **1.** Check flare and flare seat for defects that might cause leakage.
- **2.** Align tube with fitting before tightening.
- 3. Hand-tighten swivel nut until snug.
- **4.** To prevent twisting the tube, use two wrenches. Place one wrench on the connector body and tighten the swivel nut with the second. Torque to values shown.

If a torque wrench is not available, use the FFFT (Flats From Finger Tight) method.
